Appliance Housings- 600mm

IMPORTANT INFORMATION- PLEASE READ CAREFULLY

Shown below is a general assembly diagram and a list of fittings. These show the correct number of parts and fittings required to assemble the cabinet. Please note that all parts are identified by a capital letter (eg. A) and fittings are identified by a lower case letter (eg. a). These will be referred to in the following instructions.

The assembly sequence is shown in logical numbered steps.

There may be extra parts and fittings supplied, do not discard these until your kitchen is completed.

The important parts within these steps have been highlighted to help with identification.

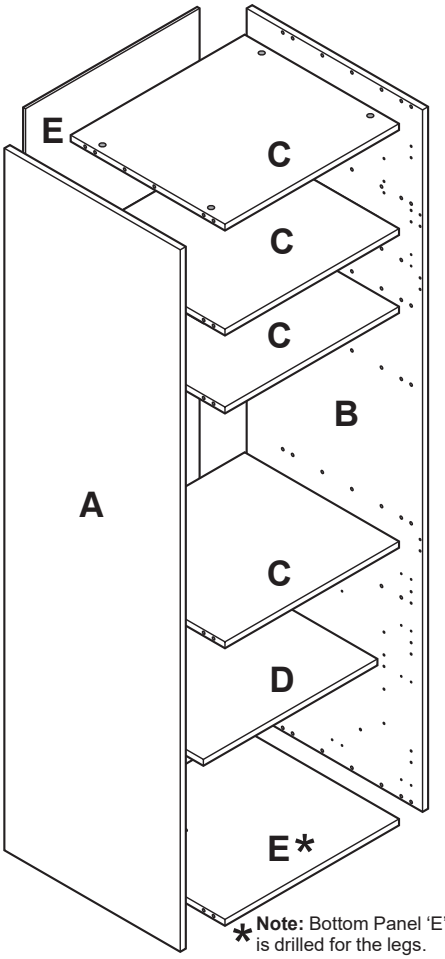
Note: Drawers and plinths referred to in these instructions are supplied separately.

Useful tips: Lay large panels on the floor and use the packaging to protect the panels.

Do not overtighten screws. Plumbing, gas and electrical services should be prepared by an approved tradesman before installing the new kitchen.

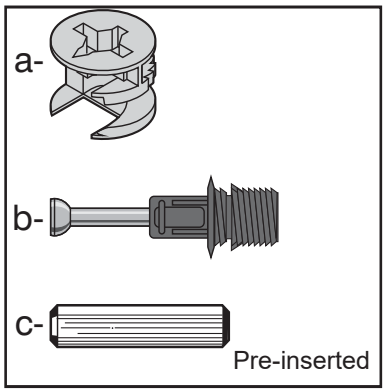
CAUTION: SMALL FITTINGS CHOKING HAZARD. KEEP AWAY FROM SMALL CHILDREN.

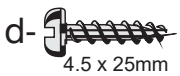
COMPONENTS

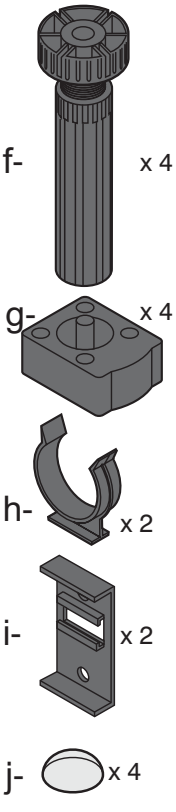


***Note:** Bottom Panel 'E' is drilled for the legs.

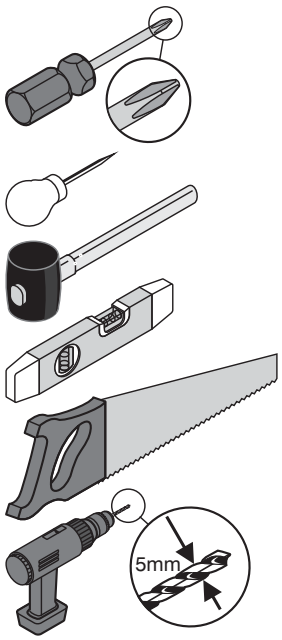
FITTINGS

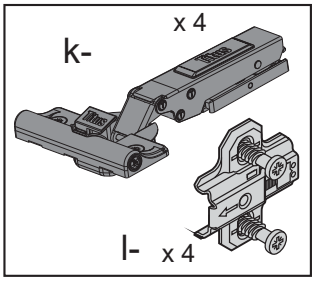






TOOLS REQUIRED



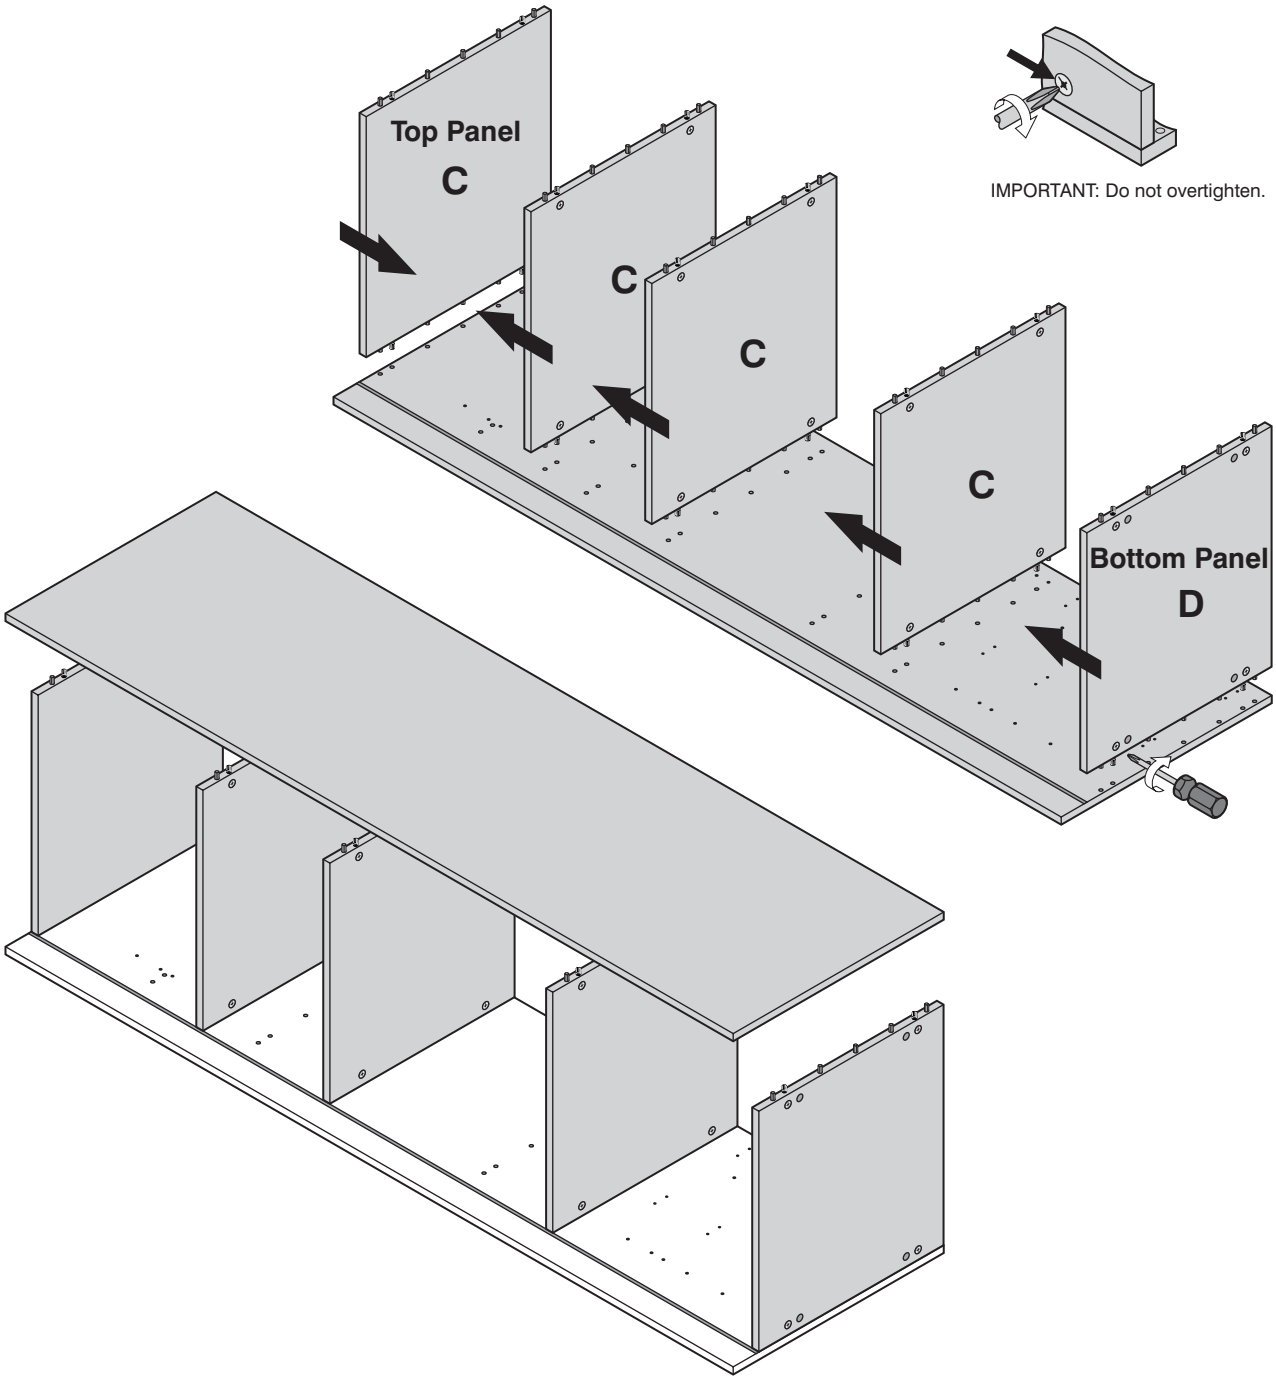


3

Important: The panels must be fitted with the cams positioned as shown.

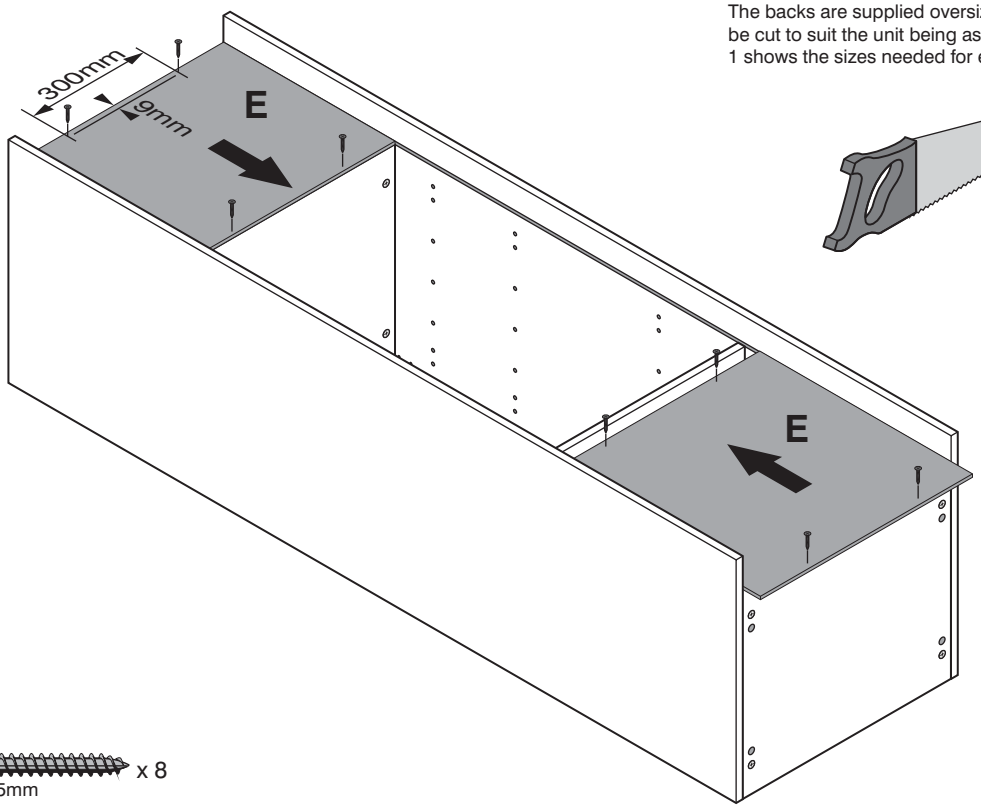
The arrow shows the way up for the undrilled face.

The panel 'D' is drilled for the legs and must be the bottom panel.

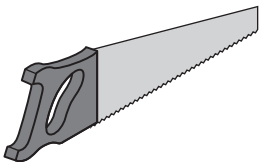


IMPORTANT: Do not overtighten.

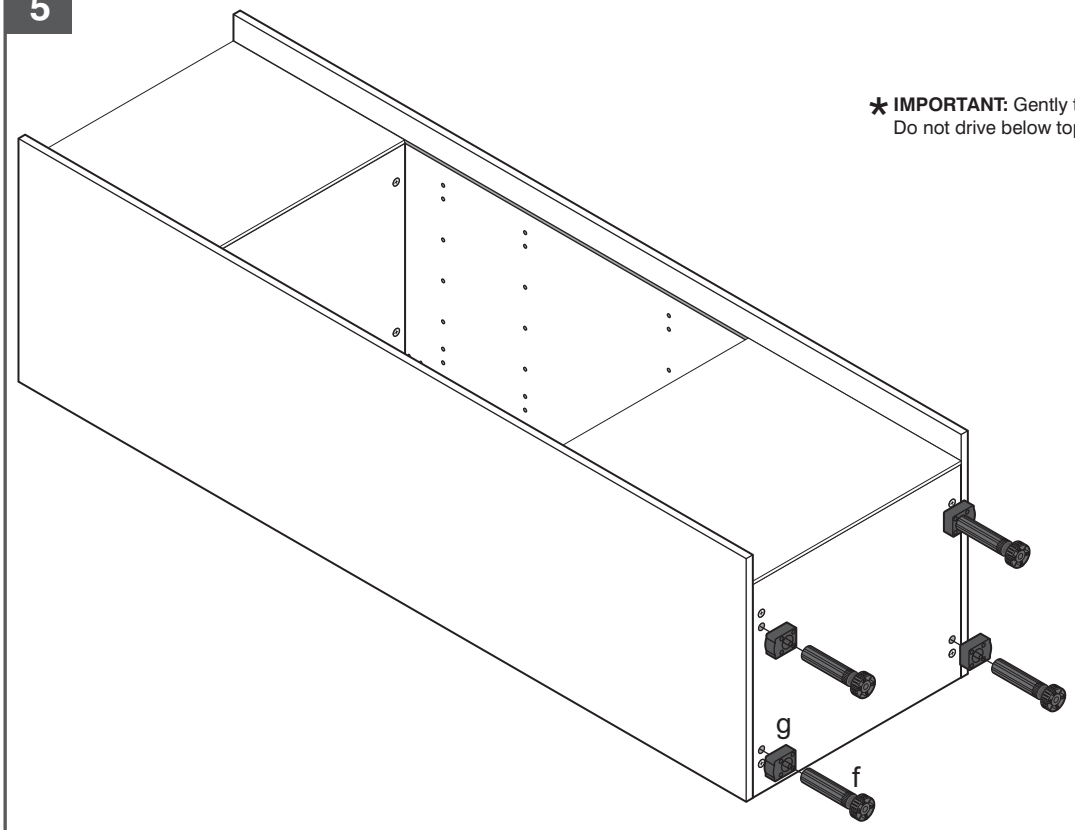
4

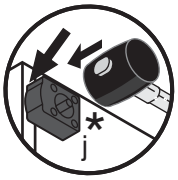


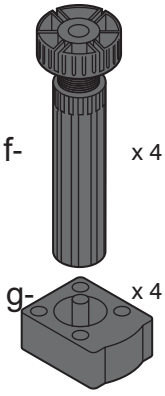
The backs are supplied oversize and need to be cut to suit the unit being assembled. Step 1 shows the sizes needed for each unit type.



5







✱ **IMPORTANT:** Gently tap the centre pin down. Do not drive below top of leg boss.
